

REFLECTING & LOOKING FORWARD:

The spring craze is here, and we at AgHub are here and ready for the new season. The past couple months have been busy for us. AgHub Genetics is up and running, conditioning seed for Stine Seed Company.

In addition to finishing up projects from 2020, we have begun looking forward. We will begin construction in May on a new ammonia facility to further expand our sales reach. Our goal from day one has been to service all needs of our customers. This construction will be complete and ammonia sales will begin for Fall of 2021.

Morgan started with AgHub Midwest at the end of November and has been involved with a lot of our current customers' sales, and she will assist with future sales as they develop.

Morgan recently graduated from NW Missouri State with an Animal Science Degree in Agriculture Business. She is assisting with all sales transactions here. While sales is only part of our process Morgan helps coordinate each acre's plan from start to finish. She will be available for all customers' questions and changes as Spring progresses.

If you would like to reach her directly with any changes to your plan or schedule a time to learn more about our offerings, please feel free to reach her directly at morgan@aghubmidwest.com or (712) 249-4465.

HERBICIDES

AgHub is now offering two of our own herbicide programs, Summit and Emerge.

SUMMIT

Summit Herbicide Programs are built for all Glyphosate tolerant corn varieties. Our programs are built for success with combinations of post-patent herbicides also known as generic herbicide formulations.

EMERGE

Emerge Herbicide Programs are built for both Enlist E3 and XtendFlex soybeans. Our programs are specifically built to each herbicide tolerance to bring success to every trait platform. They are combinations of post-patent herbicides also known as generic herbicide formulations and branded herbicides.

SEED TREATMENTS

BIOEDGE TREATMENT

BIOEDGE: AgHub also has a corn overtreatment built for early establishment of corn roots and nutrient uptake. This treatment is

Continued on next page »

a blend of biostimulants, micronutrients, and plant hormones. It has similar effects as starter fertilizer without the hassle that starter can create. This treatment has been tried and proven on a lot of our customers' acres over the past 4 years. Sales and interest continue to grow on this product for us.

LEVEL

The following blends have been formulated and are available from AgHub Midwest:

LEVEL F: A blend of 4 fungicides and a silver polymer for a smooth finish, \$4.25/unit

LEVEL FI: A blend of 4 fungicides, an insecticide, and a silver polymer for a smooth finish, \$8.50/unit

Saltro: Syngenta's SDS Treatment, \$9.75/unit

iLevo: BASF's SDS Treatment, \$9.75/unit

COVER CROPS

AgHub Midwest plans to move forward distributing, cleaning, and selling cover crops from our sister company AgHub Genetics. This will be a new venture for us that we will be pursuing this summer in preparation for fall of 2021. We believe cover crops will continue to grow in our immediate area. We want to provide you the knowledge and results to build blends that best fit your operation.

There are many new cost share programs for first time cover crop growers, crop insurance subsidies, and carbon credit opportunities. We will be sure to keep you up-to-date as this venture materializes for us. If you have any questions or interests please inquire.

WELCOME TO THE TEAM!

We are excited to introduce you to the newest members to our team!

John Schultes
AgHub Genetics Seed
Production Manager

Avery Wheatley
